

Study of Clinician and Behavior Analysts Behavior with Patients and Clients

We would greatly appreciate your completing this questionnaire. Please accept our personal thanks for your help. The purpose of this study is to develop a broader empirical basis for the understanding of clinician and applied behavior analysts behavior. It is to facilitate the discussion among members of our profession, and to further our understanding of clinical and behavioral practice cross-culturally. More specifically, we are interested in knowing how clinicians and behavior analysts of different cultures view certain behaviors and how these behaviors may affect patients and clients. You will be asked questions about whether or not a particular behavior is unacceptable when carried out in the arena of the clinician-patient relationship and whether these behaviors harm and/or benefit patients.

This study is being conducted by Michael Lamport Commons, Kathryn M. Adams, Patrice Marie Miller, Larry H. Strasburger and Thomas Gordon Gutheil. Your participation is completely voluntary and your answers will remain anonymous. There are no right or wrong answers. You may stop at any time. When you are done, please return the questionnaire to:

Michael Lamport Commons, Ph.D.
Assistant Clinical Professor
Program in Psychiatry and the Law
Department of Psychiatry
Harvard Medical School
234 Huron Avenue
Cambridge, MA 02138-1328

Telephone (617) 497-5270
Facsimile (617) 491-5270
